# Introduccion to REC MISSION

## .01 What is rec token?

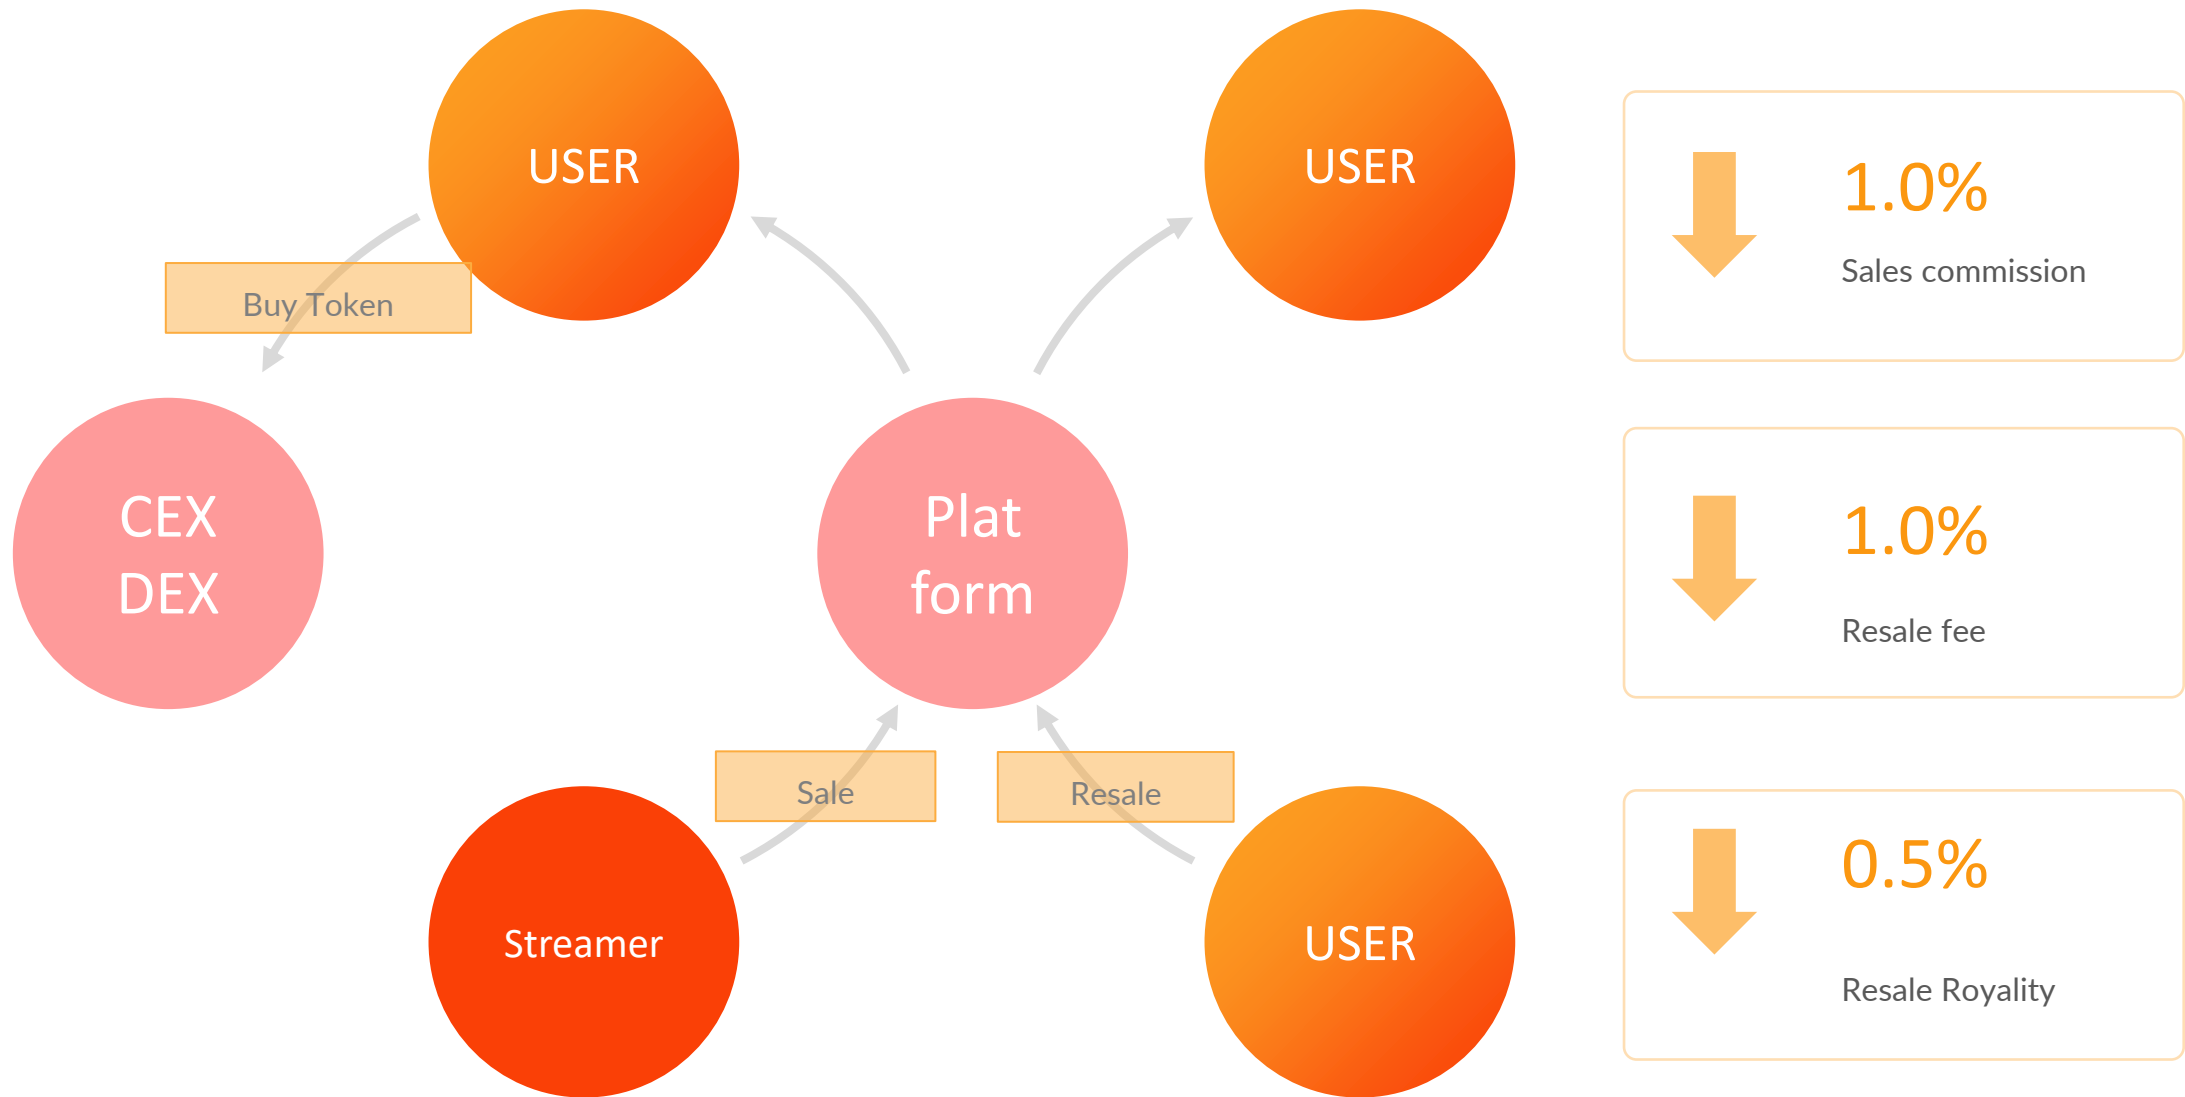

REC tokens are designed to benefit both streamers and their fans by using a unique NFT platform, and we plan to implement a Defi feature that will allow staking in pairs with related tokens.

## .02 What are the uses of REC token?

The following is an explanation from the perspective of both distributors and users (fans).

- The distributors can sell their NFT directly to the fans. For example, they can hold events related to their NFT to make their core fans even happier, or hold NFT airdrop events to increase their own name recognition.  
For example, you can make NFT-related events and increase your own visibility. In addition, you can earn the commission when your NFTs are resold, so you can have a long-term source of income by creating NFT with high resale potential.
- Users can directly purchase NFT from distributors and able to support their favorite Youtubers or find new Youtubers through NFT. In addition, if you purchase NFT that have events attached to them, you can participate in highly exclusive events. The commission paid for buying and selling on the NFT platform will be used for marketing purposes to foster Youtubers from REC tokens.

# About NFT Platform

Play Ticket

5,000,000<sub>REC</sub>

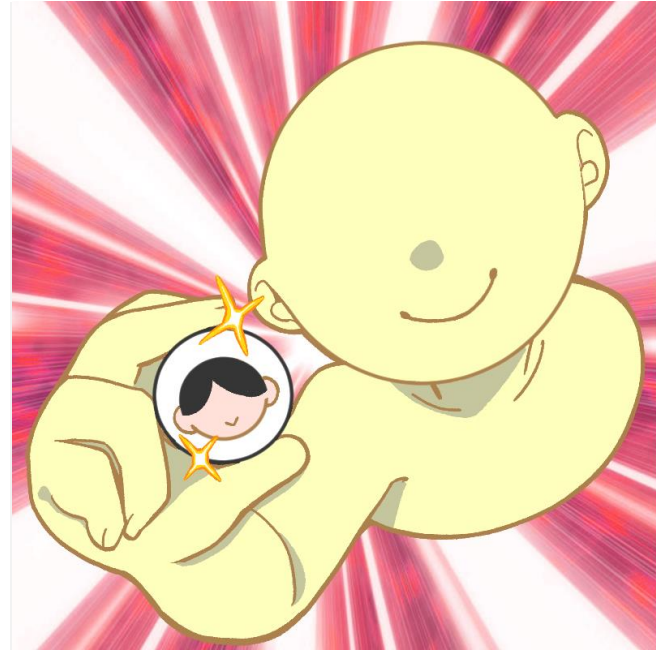

To burn the NFT, you can talk and battle and cooperative play with the streamer.

Limited items

1,000,000<sub>REC</sub>

By burning the NFT, you can get exclusive videos and images for the holder by the streamer.

Membership batch

500,000<sub>REC~</sub>

Some of the NFT will be sold as badges with different rarities, and some of the higher rarities will be signed by the streamer. We are also planning to make events for high rarity badge holders only.

# Examples

Prices and contents are subject to change
