- ✓ ***Entertainment platform created by stars and fans.***
- ✓ ***World's first DeFi sponsorship system between stars and fans.***
- ✓ ***Multi-play and communication place that's optimized for fans.***

INTRODUCTION

BITMIC Platform is a new social entertainment ecosystem built on the basis of three core elements: fans, stars and commerce. The BITMIC Platform was launched to provide Token that can be used in various s ocial areas and to create a simple platform that can be used online. This ensures transparent and fair us e and is a reasonable way to apply directly to real life. However, this Token is only aimed at strengthenin g transparency, and the goal of the actual service created by the BITMIC platform is a more scalable shar ed ecosystem.

Our BITMIC service is a platform based on Blockchain that allows influencer and customers to actively expand together. We want to not only use Cryptocurrency assets easily, but also to systematize the entire entertainment industry within the Blockchain base and build an ecosystem. What makes this possible is Blockchain technology called distributed technology. Using that Blockchain technology, we have created a new ecosystem in which entertainment influencer and customers share profits together through distributed finance, running online broadcasting, fan service, and live shopping.

INTRODUCTION

BITMIC is not just a concept of creating a distribution structure through personal broadcasting or virtual assets. We want to create our own ecosystem by synchronizing it with basic values in our daily lives.

BITMIC Platform is a metaverse blockchain platform optimized based on NFT services for artists, Live Co mmerce, and Influencer Entertainment markets.

BITMIC allows people to directly participate in the BITMIC ecosystem in trusted online and offline enviro nments, or indirectly communicate online with influencer to purchase products and obtain information. This powerful user-based platform also allows you to exchange Token, a local currency that is actually av ailable.

Finally, BITMIC is an ecosystem where everyone can enjoy and develop Live commerce, fandom, and ent ertainment with transparent and fair management and reliable blockchain data, and each individual can share various experiences with its members.

Commerce that changes based on streaming

Live commerce, a term for a combination of streaming video and e-commerce, will revolutionize the retail industry and consumer shopping habits. The following is a summary of the formation of live commerce, trends in retail space, and future predictions.

Evolution of the online industry

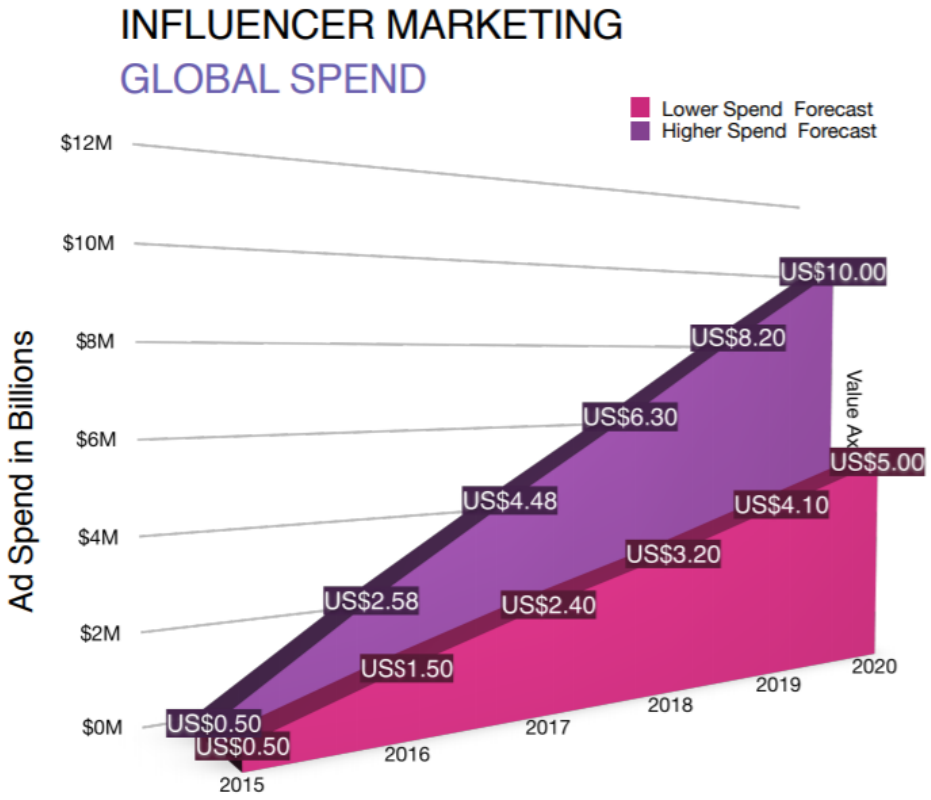
Offline stores have been closed for a while due to the influence of COVID-19. However, with the expansion of the pandemic situation, store closures have now entered the hyperdrive. More than 8,000 retail stores will close in 2020, proving that "business as usual" is no longer a good option.
Today, chatbots and mobile apps provide smoother online customer support. Machine learning technology provides recommendations optimized for all of our needs. Night delivery has also become common.

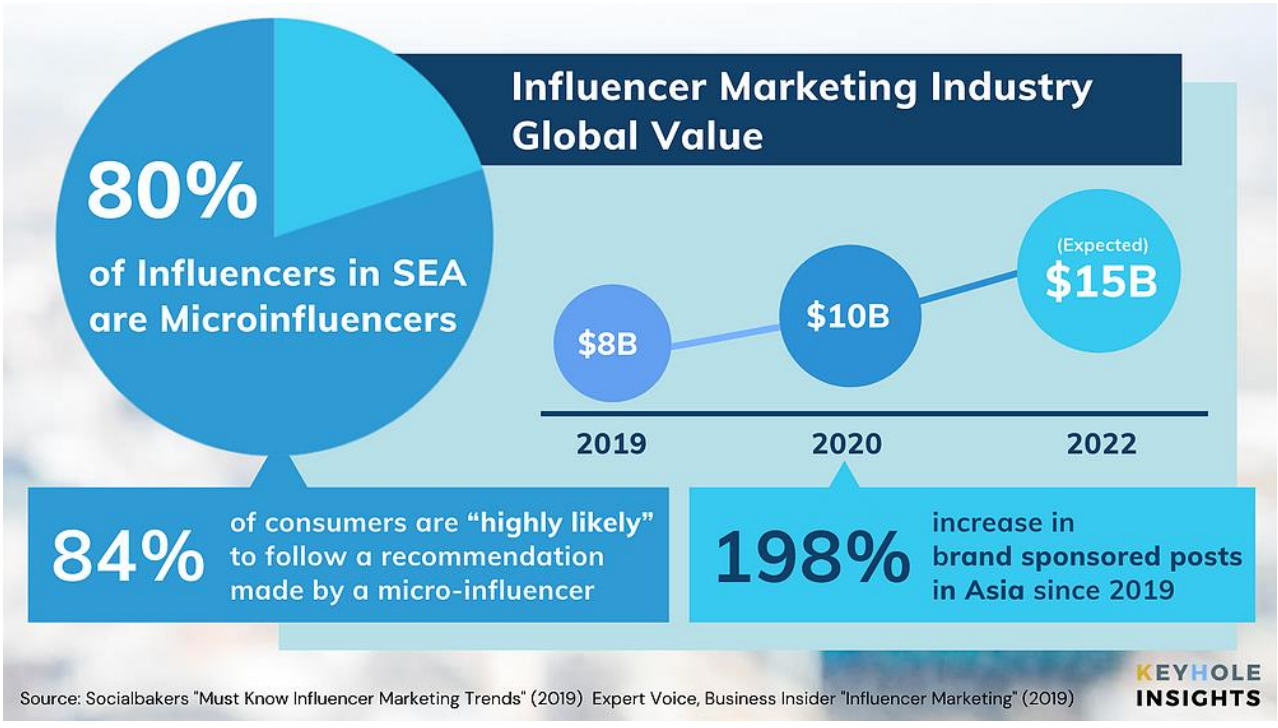
E-commerce has already caused changes in daily life. And even if the current closure is eased, physical shopping malls will continue to deteriorate. However, shopping in the digital omits some aspects that can be experienced in stores.

Shopping has traditionally been based on sensory experiences. Visual, tactile, sound, smell, and taste are all useful when evaluating purchase items. For this reason, Costco offers free samples and Car companies offer a trial drive opportunity for buyer
Now that online has become a major place for consumers to investigate goods and services, each retailer is struggling to replicate these physical experiences of shopping. It is natural and common for everyone to know that online purchases provide convenience. However, what about from a participatory point of view? Is visiting Amazon.com as fun as a rodeo drive trip?

The direction in which live commerce should develop is too clear. Today's companies want to take a step closer to providing face-to-face experiences to consumers by combining online retail and live streaming.

Influencer Marketing Status





Shopping that changes based on streaming

Type of Live commerce

Just as online shopping, which started 20 years ago, has changed the retail industry, live streaming will change e-commerce today. The convergence of this video and shopping, called live commerce, increases customer participation, narrows the gap between customers and products, and promotes sales. In auction bidding, it helps to increase the average selling price.

Let's take a look at some of the most common forms of shopping live media as follows.

Online marketplace

Online marketplaces such as Alibaba and eBay allow users to buy and sell products without having to go out of the house. Live video streaming added here plays an important role in maintaining buyers' interest. This is because simple online purchasing functions are no longer novel. Without a new class of participants, online marketplaces will also be forgotten in the past. Marketplace, which integrates live streaming into the platform, provides the closest experience to "existence" for viewers in the living room. This real-time interaction induces immediate action and improves community participation through replication of the urgency of the real market.

Live Auction

This live video streaming runs like the auction house method of the 18th century. Auction organizations around the world invited bidders to the live sale room and introduced interesting auction methods. Live streaming has expanded participants by opening a bid pool to those who are physically unable to attend, identifying the needs of participants with various interests, and contributing to the sale of each product at an appropriate value. Online auctions are services of large corporations, so it is important to stream them in real time. Whether it's a regular product or art, if there's a delay during real-time streaming, the bidding may not be recorded properly, so you have to maintain an optimal condition.

Shopping that changes based on streaming

Influencer streaming

Today, celebrities are not necessarily available only on large screens. Reality TV has put media characters like Kylie Jenner on the map, and more and more stars are enjoying fame through social media. This sequentially provided new revenue opportunities.

With an already secured audience, influencer can utilize live streaming with personal brands to promote your favorite products through conversations. influencer streaming started on social media, but is now expanding to e-commerce sites. This format has a statistically high young population participation rate. Only 26% of the general population's purchase decisions are recommended by social influencer, but 44% are for Generation Z .

Live Event

There are many associations between live events and the categories described above. Nevertheless, events worth reporting, such as product launches, limited edition drops, retail holidays including Singles Day or Black Friday, are well suited for shopping live streaming content.

Kohl's was the early adopter of Live Commerce, which streamed the LC Lauren Conrad Runway show during New York Fashion Week in 2015. Viewers can purchase all clothing appearing on the catwalk through a dedicated portal provided through Periscope. Recently, you can purchase items in the catwalk of Louis Vuitton and Victoria's Secret in real time through mobile shopping streaming.

NFT market rising and BITMIC NFT

Rapid rise of NFT services

High auction price that shocked the market.

Mike Winkelmann's JPEG work "Everydays: the First 5000 Days", dubbed "Beeple," was sold for $69.3 million (about 78.5 billion won) at Christie's New York auction on April 11 (local time).

Expanding to various asset

The auction price of Twitter CEO Jack Dorsey's first tweet surpassed $2.5 million.

Increase in NFT-based platforms.

NFT-based platform services, including Game Cryptokitties, which buy and sell virtual cats, and NBA Top Shot, an exclusive trading space for NBA-certified highlight videos, are increasing.

BITMIC's video service, chatting, and metaverse NFT

Features such as video services and group chatting in YouTube channels are installed in METAVERSE, and we have added space for displaying artists' NFT assets.

Video and chat service using METAVERSE.

Automatically distributes rewards from staking services.

LIVE SERVICE for BITMIC PLATFORM

Unique Contents

- BITMIC Platform is not a service that displays a variety of products and distribution information like a typical shopping mall. It is evolving into a form of shopping that communicates with customers th rough social media and optimizes and provides practical experiences through live streaming. In par ticular, by forming a close bond between influencer and customers, the subject of live commerce, p roviding accurate information and increasing interest, we can implement a show time that both cus tomers and producers enjoy together. The content created in this way will be promoted globally thr ough various social media and will naturally expand accessibility.

Participatory platform for fans

- BITMIC Platform provides opportunities to improve intimate relationships between service providers and fans as a participation platform for customers of specialized products.
- BITMIC Platform supports investment and customer attraction for the development and growth of various industries for Wellness.
- BITMIC Token is a safe distribution asset for building a sustainable ecosystem where all related industries can coexist.
- BITMIC Platform operates an open communication space so that many members who want to enjoy life can directly participate in service improvement.

Unique Shop for fans

- Operate a unique live shopping mall as a safe use space for the BITMIC ecosystem.
- Unique shopping malls only support the sale of exclusive products and collections that are not available el sewhere.

Win-win objective of BITMIC

Platform for Artists, Reward Service with fans

A platform that ensures that Artists can easily communicate with fans. BITMIC is a platform for Artists to join fans and create a virtual asset value ecosystem.

Vision & Mission

Many social services only provide artists with a one-sided gift method in which Fan sends coin points. However, BITMIC can issue photos or videos of artists in digitized NFTs and sell them to customers, and staking to artists desired by Artist DeFi Pool to win rewards for both Artists and Fan. This method began with a simple principle of win-win, but will gradually expand and become common throughout the entertainment industry.

NFT Market Share

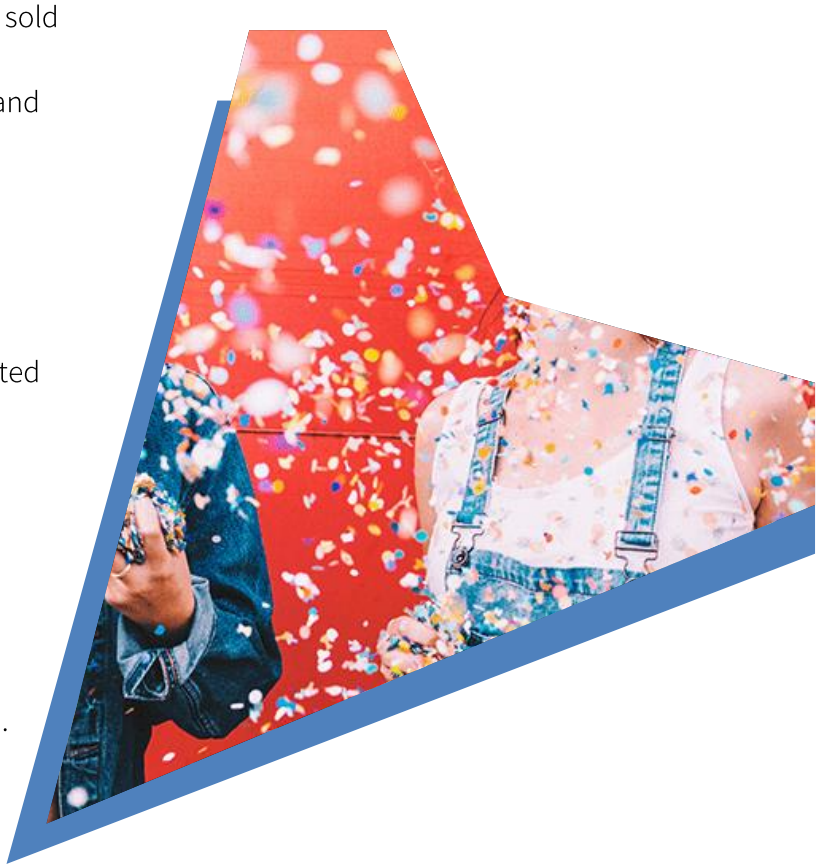
NFT Market, which is operated and sold separately as an artist's address, protects artists' digital copyrights and rewards profits.

Artist Staking Pool

Establish a win-win ecosystem by staking fans in the DeFi Pool operated under the artist's name.

Multi Reward System

All rewards are received by sharing with Artist and Fan, and all reward structures are managed fairly and transparently based on Blockchain.



BITMIC's amazing originality

Personal Staking & Multi - Reward System

BITMIC is the first to run an exclusive NFT market for artists. In addition, BITMIC provides support services in the form of DeFi for artists, but it was actually developed to provide rewards to ecosystem members through Staking and Share Service to satisfy both Artists and Fan. While distributed blockchain finance (DeFi) is operated only for rewards, BITMIC is a new concept distributed financial service operated for all ecosystem members.

Service 01

Exclusive NFT Market operation and overseas service linkage.

Service 02

New system that shares staking profits with artists.

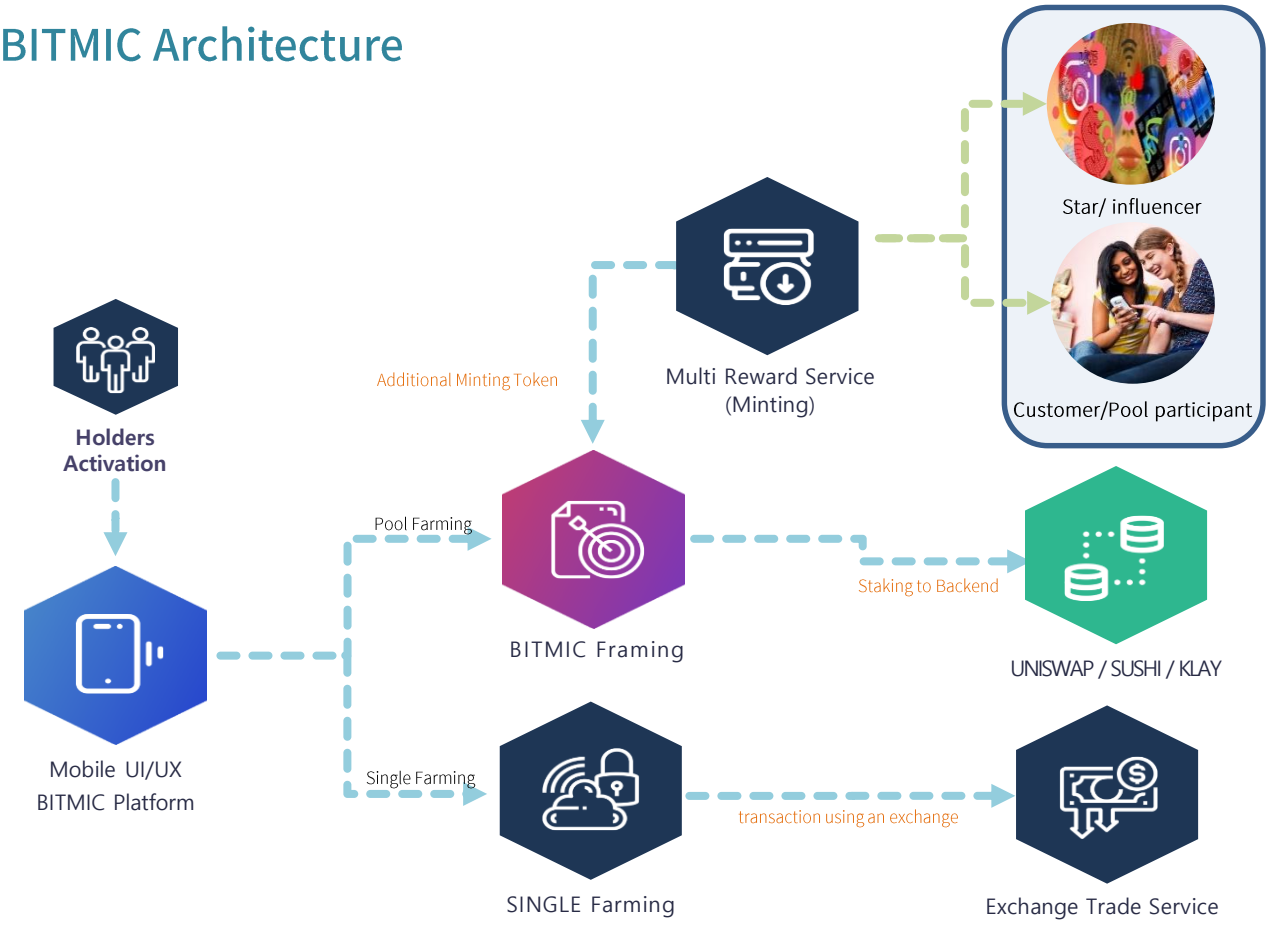
Service 03

Reasonable rewards for F an who participated in St aking Pool

Service 04

Distributed operation of all platform services based on participants

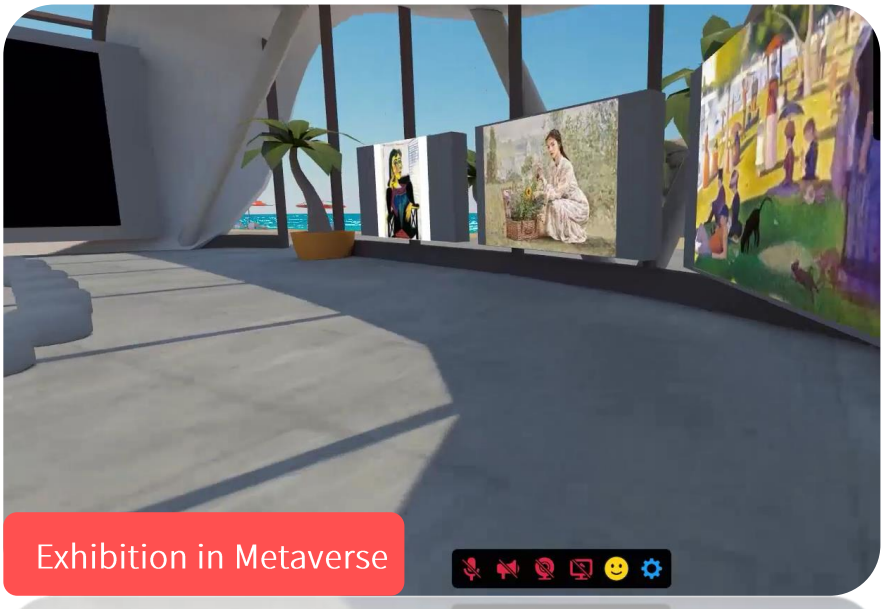
BITMIC Architecture



BITMIC NFT’s originality

Personal Staking & Multi - Reward System

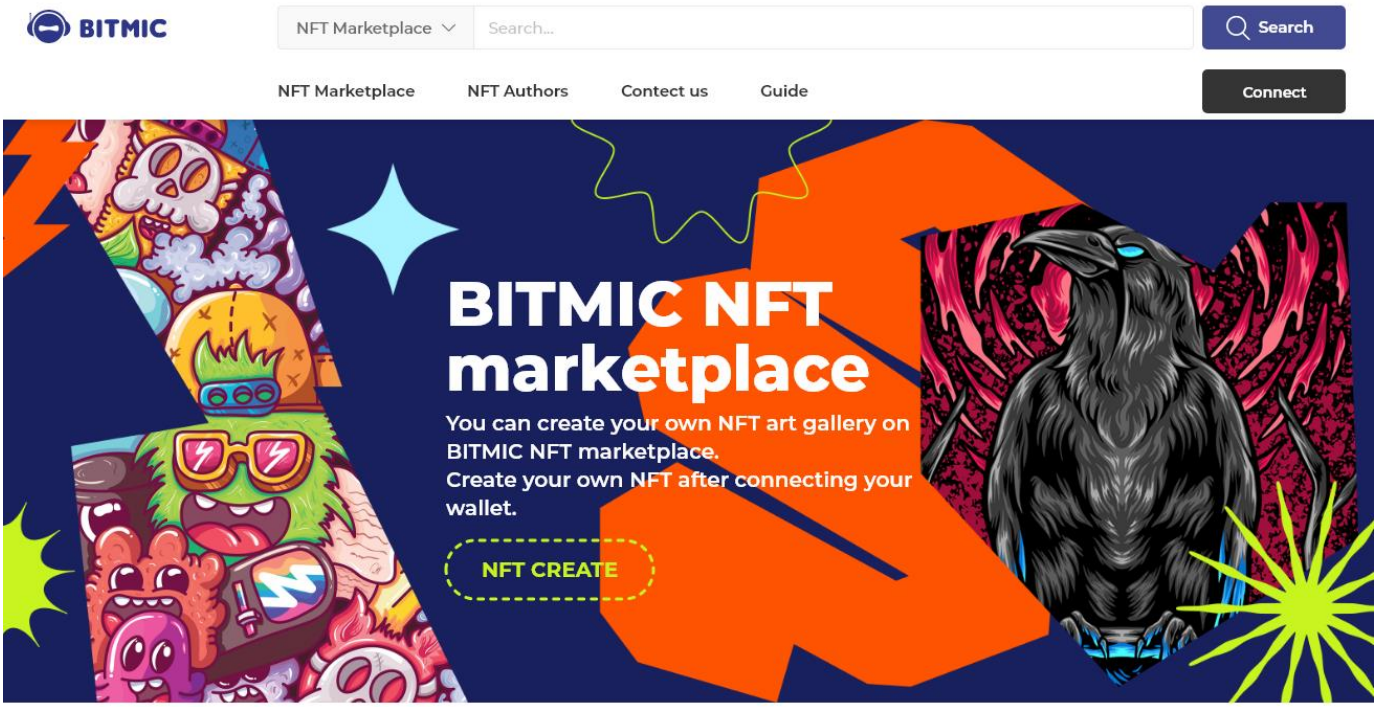
- ✓ **Story-based NFT** :
  Attracts customers' attention by giving detailed storytelling to a single photo.
- ✓ **Desirable Collection** :
  Create an image that people want to own by providing each photo in a collection rather than simply listing it.
- ✓ **Building high values** :
  Prices are made within the market structure, but we can contribute to further price hikes in the commercialization process.
- ✓ **Reliable reward** :
  Operates reliably based on the initially designated Smart Contract by utilizing the characteristics of the blockchain that cannot manipulate transaction details or fees

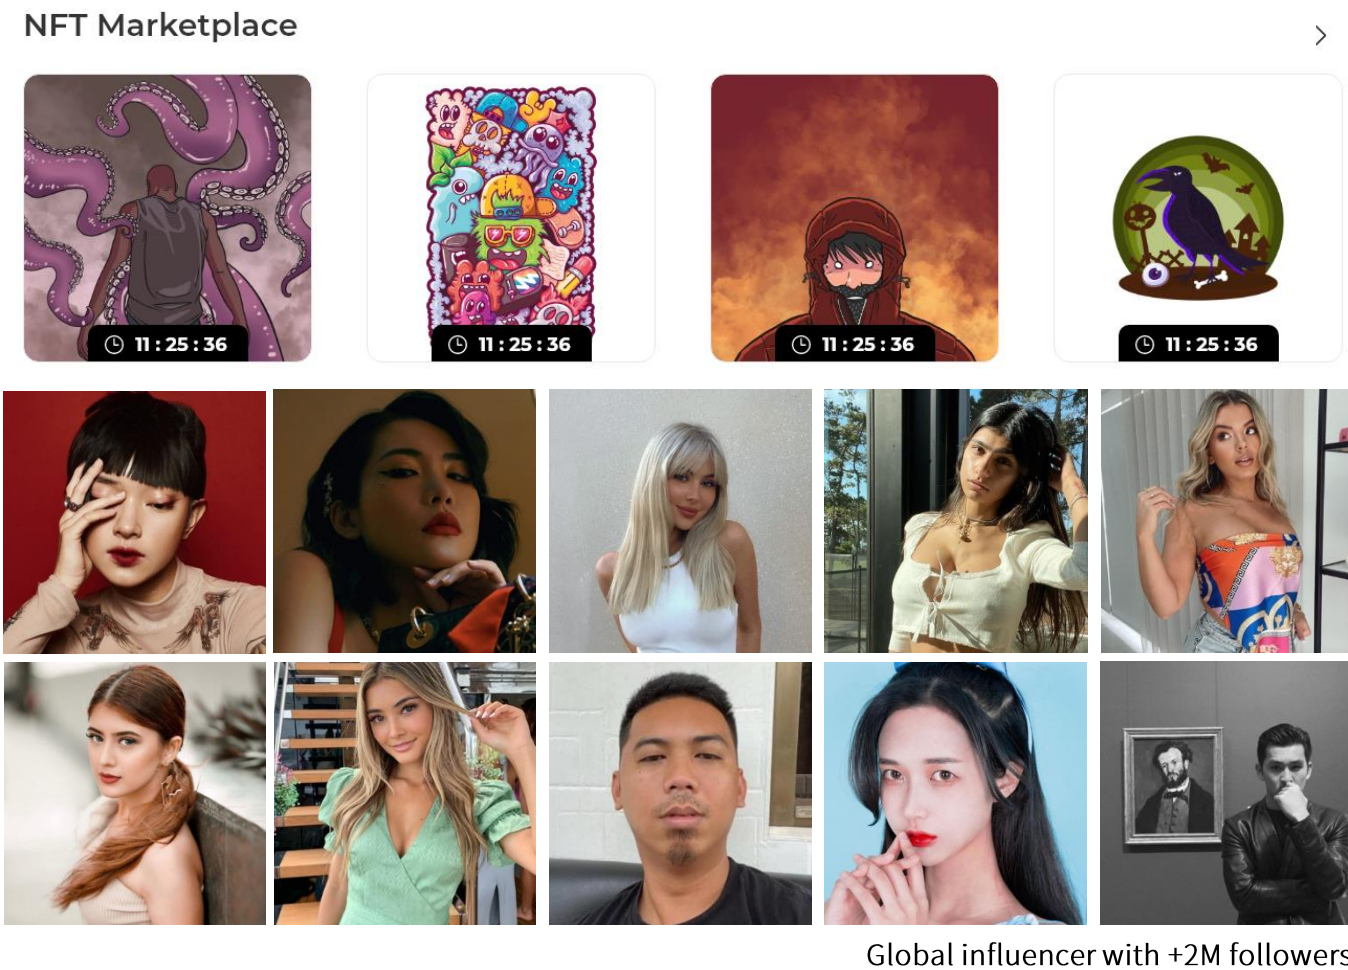


• BITMIC METAVERSE

Now, the fandom space should be expanded from a space that is only text, images, and videos such as Instagram to a space of virtual reality. However, these VR spaces also need a social community that is the basis for providing richer entertainment. BITMIC's NFT will be built in the most suitable form of data to expand services launched in the general social community into VR space through Metaverse services. We want to implement a true world of metabus NFT by applying this refined data to virtual space.

BITMIC NFT Market place





Global influencer with +2M followers.

Win-win objective of BITMIC

Live streaming-based shopping is booming in the United States as more people do not visit offline stores. Online has become one of the only channels for retailers to communicate with customers. Physical shopping malls will continue to deteriorate even after the current closure is eased.
Instagram introduced Live Shopping in the second half of 2020, and Facebook is testing Facebook Shops. Walmart's Shoploop and Google's Shopify both participated in the party to provide users with the opportunity to purchase products that appeared in real-time streaming based on smooth UX. Many VC support companies, including NTWRK, Popshop Live, ShopShops, and ModaOperandi, have also started their services with the spread of the virus.

COVID-19 forced retailers to think outside the box within the safe zone. With the store closed, retailers had to find a new way to engage consumers familiar with shopping in the store as well as existing e-commerce consumers at a significant level.

At the end of 2020, Walmart held an hour-long shopping event in collaboration with TikTok for those who are reluctant to visit high-risk shopping centers. Influencers used their influence to demonstrate items, and through the app, they set up a system that allows viewers to purchase quickly and smoothly. However, microsellers will soon use the in-app purchase function.

In this market situation, the goal of BITMIC serviced is clear. It is to expand live commerce using influencer throughout the distribution industry and apply its own payment methods to create an ecosystem unique to BITMIC. In particular, it is important to make influencer and customers, the subject of live commerce, not just sellers and buyers, but co-prosperity partners.
To solve this problem, the BITMIC platform intends to abolish the relationship between existing services and introduce DeFi, which shares profits. DeFi, operated within the BITMIC platform, is implemented in a unique way that customers share profits with both influencer and customers by staking.

Philosophy of BITMIC

Open platform for everyone

BITMIC Platform aims to build a Commerce Platform that can coexist outside of a large service-oriented ecosystem. Anyone within BITMIC's ecosystem can be a service provider or user. We aim for a shared eco system where everyone who makes up the ecosystem registers and creates products and services, not a bait service that is excessively low in existing large services. The BITMIC Platform provides a fair shared f oundation for anyone to register new products or services. This is to provide services that can reward pr ofits to ecosystem members in addition to sellers with commercial purposes. By creating a platform with a win-win structure for both individuals who enjoy the shopping industry and wellness and producers w ho make new products, we want to create a background to enhance the quality of the Commerce ecosys tem by improving the unfair market transparently and fairly.

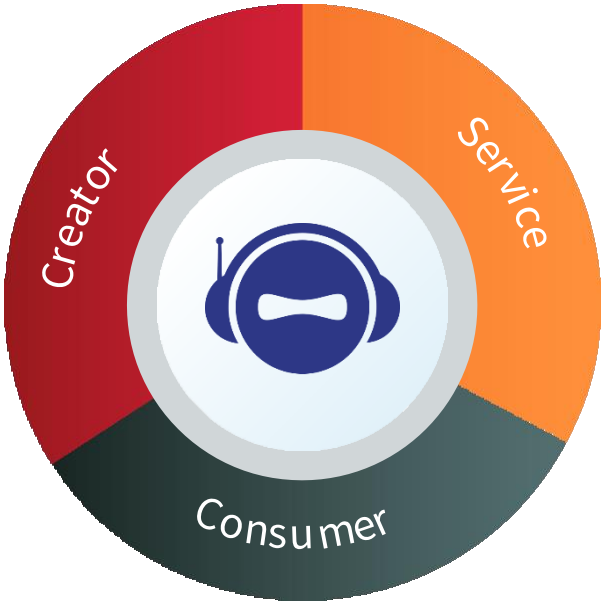
Reliable service

BITMIC Platform does not provide seller-oriented product services that are provided unilaterally. We will selectively provide only reliable products, centering on service companies that directly participate in the ecosystem, and build a transparent and fair profit structure that allows manufacturers, distributors, and customers to coexist. As a result of this, reliable services can be provided to consumers. Within the platfo rm, producers and distributors can improve the quality of services and provide improved services throug h a system that can receive feedback from consumers.

Safe and legalized service

BITMIC Platform will legalize ecosystems that have been illegal and expedient, making them transparent and fair. Blockchain-based businesses generally have an illegal image. However, BITMIC wants to promote legally safe business.

In particular, taxes and cash use their own Token-based platform to present accurate standards, reducing concerns about laws and tax-related issues and enabling safe transactions.



BITMIC Platform

BITMIC PLATFORM Characteristics

BITMIC Platform aims to create a shared ecosystem where commerce users can participate safely and effectiv ely using tokens. We will jointly prepare services with production, distribution partners, and influencer, manag e services comfortably and pleasantly, and build a higher-level blockchain ecosystem so that customers can e njoy them at low cost.

Expectations for home live commerce are rising due to the global COVID-19 pandemic, and accordingly, production and distribution companies and marketing companies are striving to prepare more diverse, safe and personalized services. In particular, we are focusing on finding better ways to collect customer data and apply it to optimized personal services. Existing large retailers utilize low levels of data limited to data systems collected from their own and partner platforms. BITMIC Platform will provide information systems to all partners participating in the platform to develop fair and accurate customer-oriented products. This can fundamentally improve the quality of the entire product because it improves the quality of the product serviced to customers and enables proper supply management. Customers can also check whether the various products and information provided here are true, and UX also checks for facts through duplicate verification. The BITMIC Platform is a safe and high-quality blockchain ecosystem platform that connects customers and distribution workers.

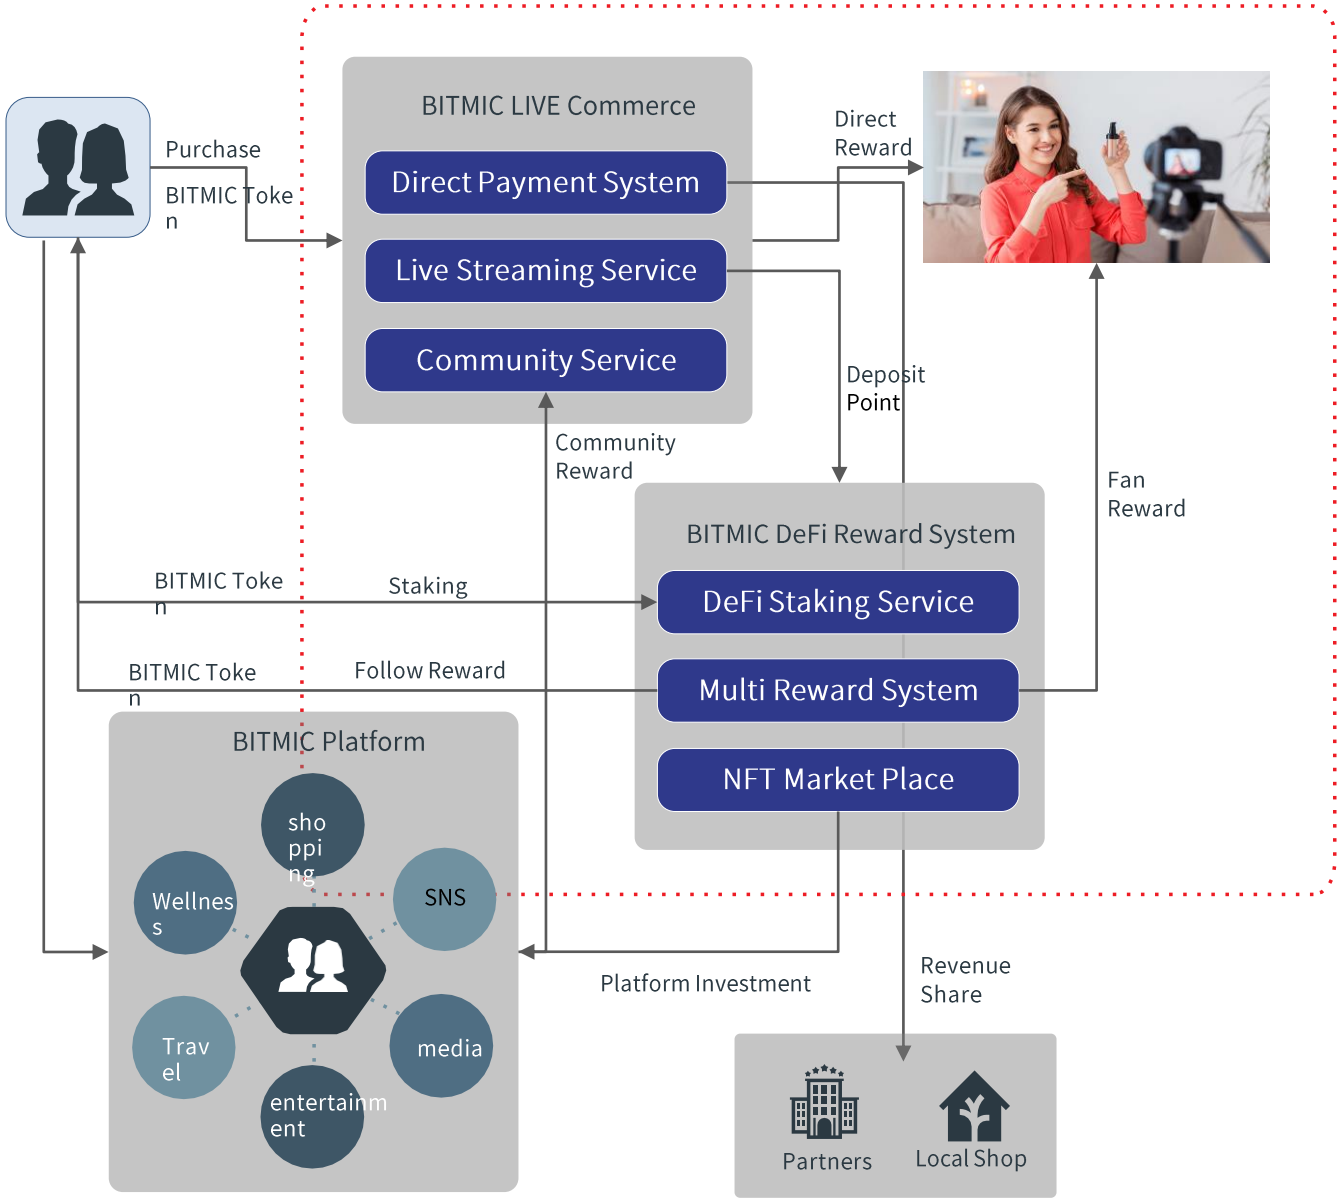
We issue BITMIC, a blockchain asset, and individuals purchase BITMIC and use it for commerce. Since then, it has a circular structure in which partners re-tax and cash the BITMIC received. Compared to other crypto curre ncies, BITMIC Token is very flexible and maintains value based on the demand for products and services provi ded by partners. BITMIC Token can be used by customers and partners paying for the affiliate's services or by accumulating tokens on BITMIC DeFi personally. In addition, BITMIC Token provides accumulation through a separate system when customers share information such as their service experience and know-how through t he frequency of token use or platform, and obtains bonus Token through a POI service called the BITMIC Toke n reward system. These reward processes are designed to utilize blockchain-based smart contracts to improv e the complexity and enhance reliability of the processing process.

We are planning to introduce a global live commerce hotline based on the BSC blockchain system for mutual benefit. Partners can effectively strengthen innovation in high-quality products and services. To accommodate this, new standards and technologies must be introduced and prepared faster than larger partners to lay the foundation for competition. End users can easily access the BITMIC Platform to make reservations and make payments through simple, safe and inexpensive user experience services with coins they have. We have developed blockchain technology and have researched and prepared new Platform services for improved business methods. With these efforts, we hope that the global live commerce service provided by the BITMIC Platform will open a new horizon beyond existing service practices. It will also open a new win-win market so that large retailers, small retailers, and influencers can coexist and anyone can participate in the commerce industry. The BITMIC Platform is operated directly by the foundation and can be used worldwide through the platform. These services are managed anytime, anywhere 365 days through Amazon Cloud IoT Gateway, which have received security ratings.

BITMIC PLATFORM

BITMIC PLATFORM advantage (Basic Structure)

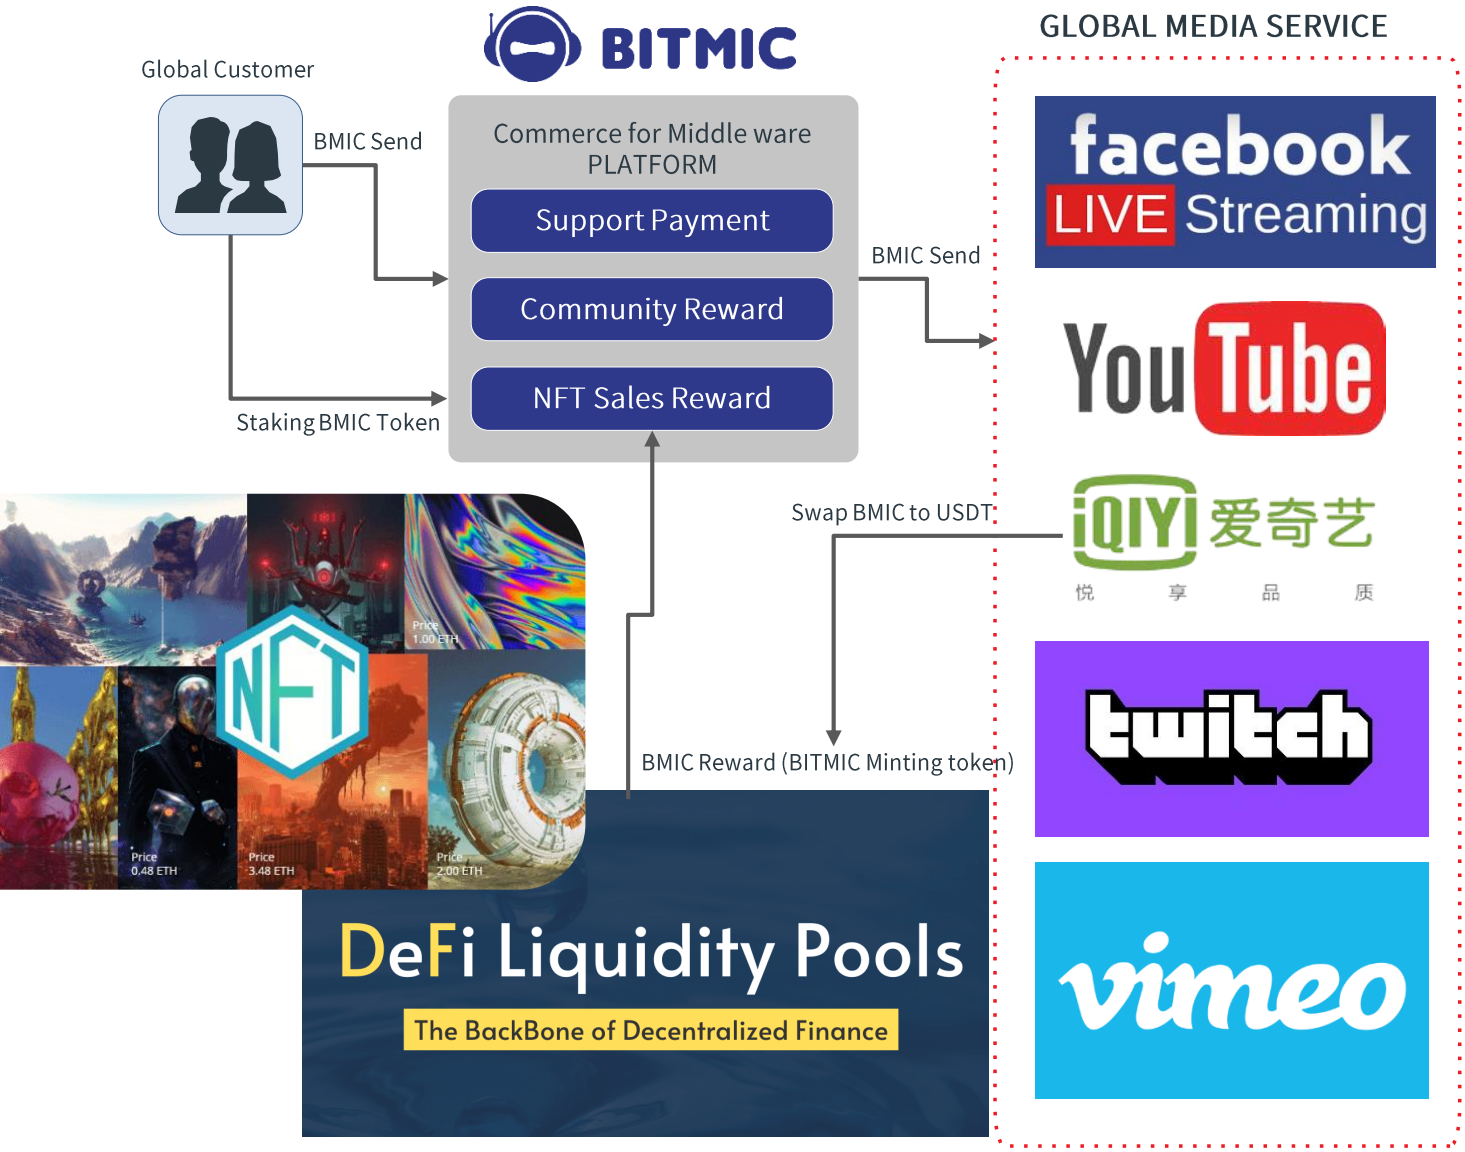
- Provides the new business opportunities to personal broadcasting services planners.
- Supports convenient and safe use by shoppers who enjoy live commerce.
- Maximizes digital copyright-based profits of various artists by utilizing the Exclusive NFT Marketplace.
- Saves operating expenses that existing businesses have spent separately and contributes to improving service quality.
- Promotes product service activation only with internal events and supports various contents in the form of events.
- Supports DeFi services exclusively for live commerce by utilizing smart contracts made from Token based on high reliability BSC Chain.
- Joint distributed financial ecosystem platform that allows all ecosystem members to share profits.



BITMIC PLATFORM

BITMIC PLATFORM advantage (Middleware for Global Commerce)

- Can serve as middleware for various media services around the world.
- Can replace the basic Payment Service. (No national or regional restrictions)
- Can contact various influencers around the world at once.
- Platform that allows competition and cooperation among other streaming platforms.
- Can exchange information on various media as a community.
- By using BITMIC as key currency, you can share a simple payment structure.
- Various copyright profits such as images and broadcast video clips can be generated by utilizing the NFT marketplace.
- DeFi Pool allows customers to share rewards with various influencers..



BITMIC PLATFORM

FOR Product Provider

For companies that plan and provide actual products, the BITMIC Platform is a very effective service that helps create customers and make payments useful. The BITMIC Platform is a powerful promotional and payment tool that allows anyone to easily market, freely register serviceable products, and utilize various communities and social networks from the supplier's point of view. The most important part is that the BITMIC service can objectively and transparently check the process of service being known by the company that wants the sales service, and based on this, sales growth can also be achieved. This process is built on a blockchain basis so that it cannot be deteriorated by someone's manipulation, so it has very high external reliability. At this time, the BITMIC Token received by the supplier can be used for marketing tools or additional promotional activities.

FOR Distributor

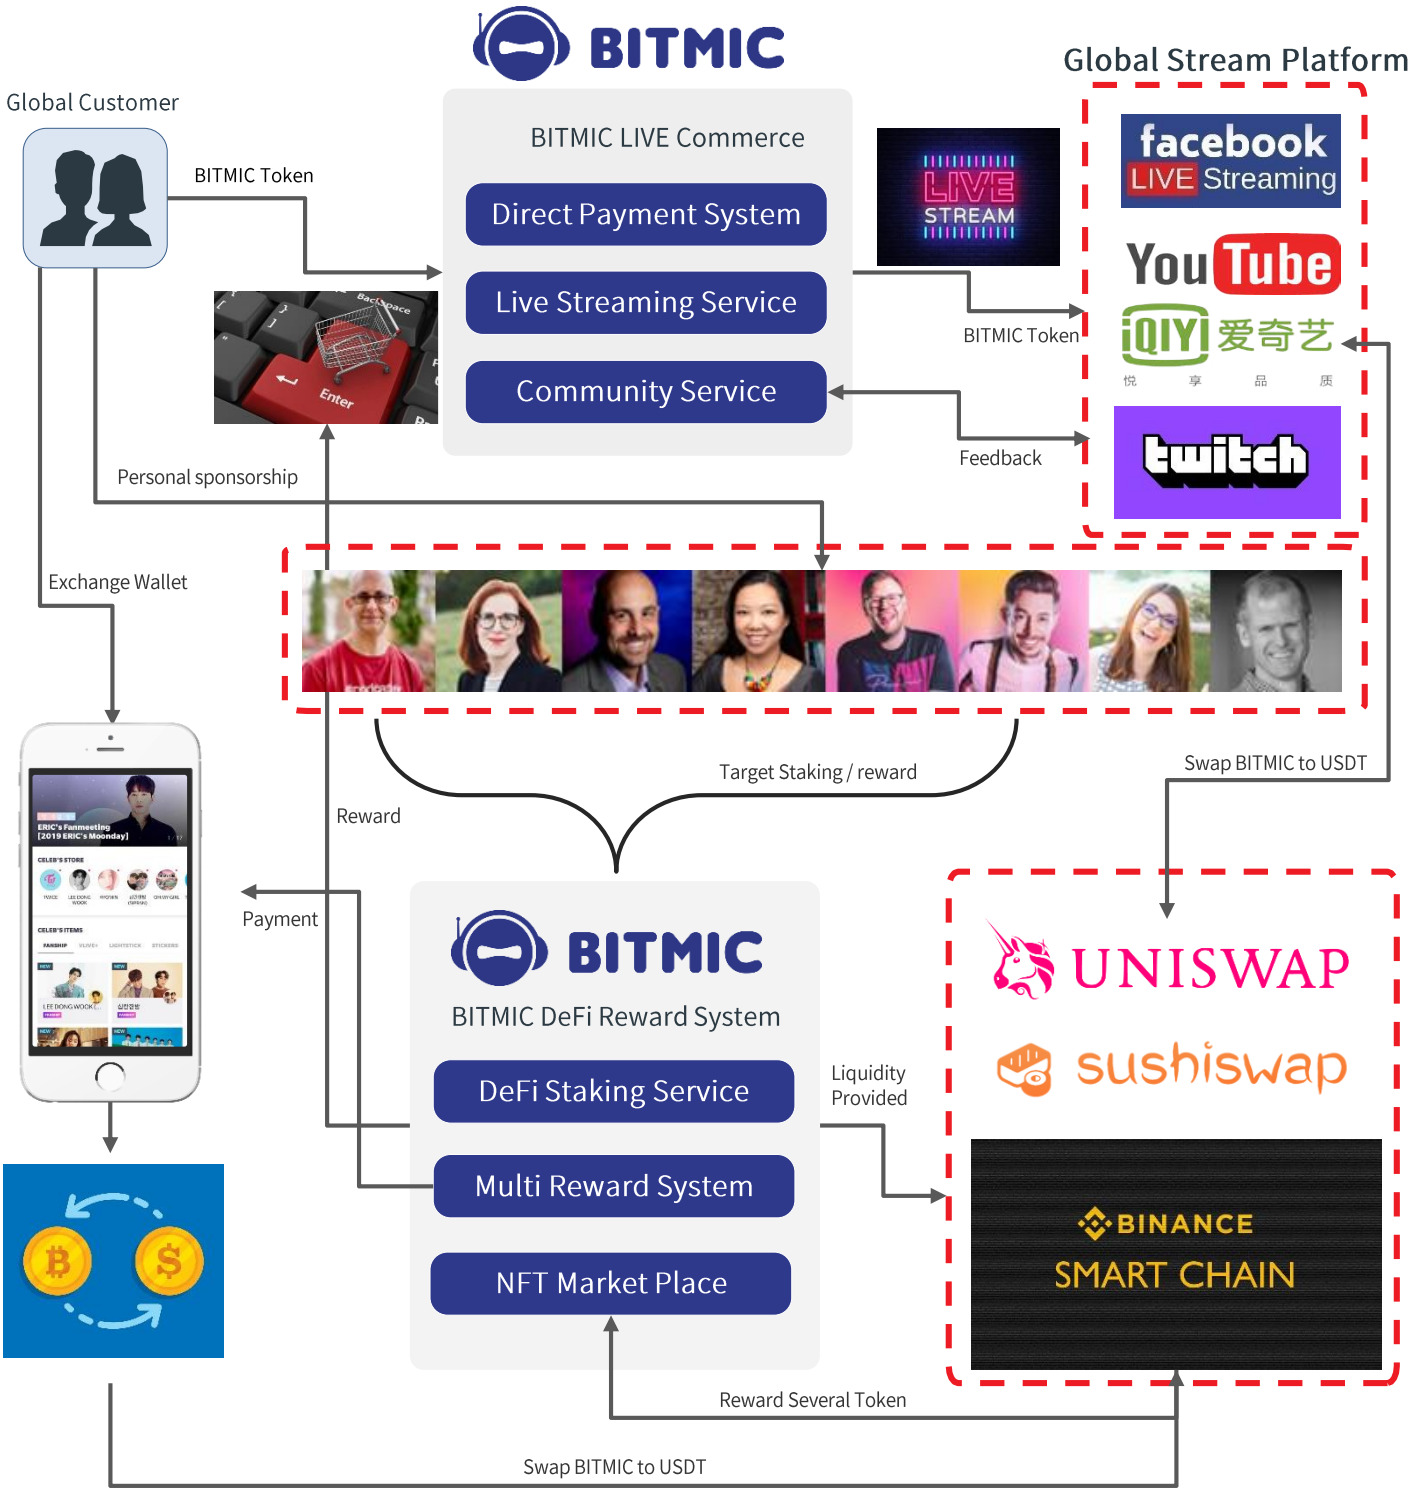
From the standpoint of product distributors (remodeling), the BITMIC Platform can receive effective supply and demand forecast information, and through the BITMIC Platform, it provides a fair commission structure between distributors and customers. Accurate usage information and propensity information about customers can be used as data for predicting the demand for next season's products and can be used as preparation for various and new product development. All of these products and customer information are stored and built in big data. Therefore, over time, very powerful information-based distribution services can be developed. The BITMIC Platform has high accuracy because it can analyze powerful AI-based customers, services, products, and propensity, and can accurately data customers' responses to the new distribution industry, so predictive data alone can contribute to improving the constitution of the distribution industry. This platform information can be provided with information to proceed with the development of new products and can be a very powerful business tool.

FOR Customer

The shopping and streaming industries are a big market that is receiving high attention around the world. Until now, however, many customers have been able to experience or purchase products only through very limited information and product promotion. The BITMIC Platform is equipped with easy and simple streaming and payment methods so that you can experience and enjoy products through various contents. And it's not just the use of virtual currency, it can serve as a member of the BITMIC ecosystem within the platform. It is a DeFi platform where influencers and customers share rewards by staking in DeFi Pool instead of giving preferred content or gifts to influencer on the BITMIC platform. Within the BITMIC Platform ecosystem, such reward communities can grow together and enjoy reliable services with high service quality and appropriate price based on transparent product information. BITMIC has the advantage of exclusively using only BITMIC Token, an internal virtual asset, which can be exchanged for BITMIC Voucher for use in offline stores and accommodations.

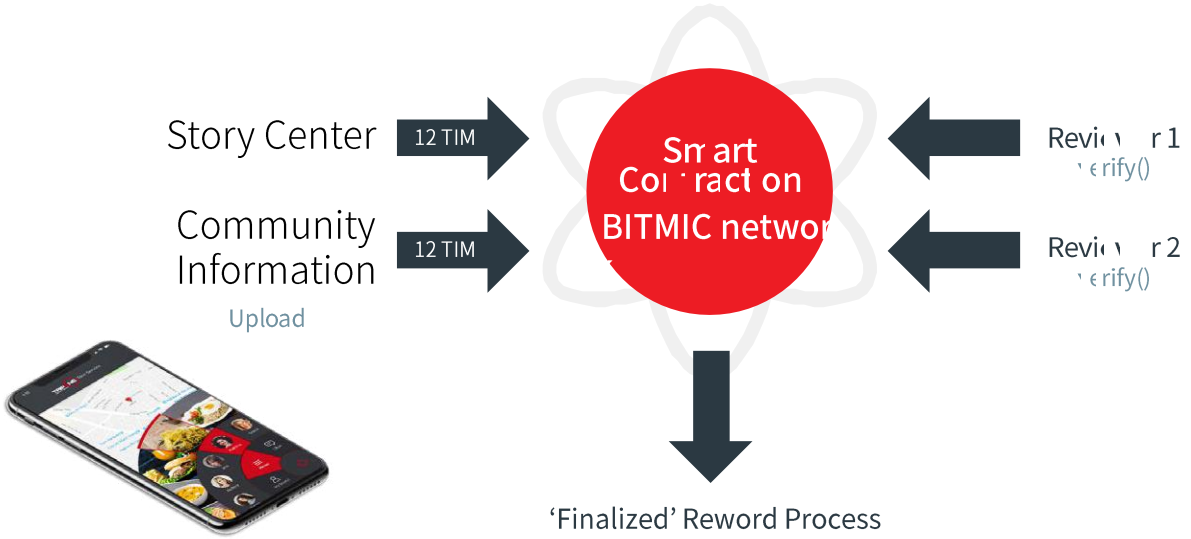
BITMIC PLATFORM (Platform Structure)

This chart is about the operation process of the Token service in the BITMIC Platform. It shows how to co nnect services of consumers and suppliers of services within the platform.



BITMIC PLATFORM

BITMIC Community Service



BITMIC Community Service provides a community where you can share a variety of product-related content with other users, including product information, influencer information, introduction materials, photos, and reviews. In this BITMIC Community, review points can be obtained through photos, review information, and personal posts left by users, and review points are mined to Token by POI Mining and paid to authors.

Customers who frequently post such reviews or materials can receive many review points, which is converted into Token to build a circular structure that can be used again in a low-cost commerce environment. Advertising and marketing posts are excluded from this BITMIC Community, and there is a separate channel through influencer to introduce products in a live commerce manner. In addition, distributors can purchase certain marketing tools through Token, and if they purchase the most important commerce room and provide content services, they can run advertisements free of charge throughout the community. These marketing tools are automatically deducted and settled from Token held when customers participate in live commerce or purchase products.

Among the live services, users of special products can purchase tickets through BITMIC Token, and products are assigned to users who offer more Token through the auction system. In addition, bonus products or special offers can be purchased at a lower price using Token.

In the cultural service within the BITMIC Community, the music streaming service is available as Token. It will also provide a separate video streaming service that allows you to watch domestic dramas and movies in real time overseas. Currently, most music markets in Korea provide music sources on YouTube, Melon, and Bugs, but BITMIC wants to provide video and music services that users can listen to, see, and enjoy overseas through separate exclusive music services.

Through these various cultural services, BITMIC will be the best differentiated open commerce information platform to share emotions and information with users.

BITMIC PLATFORM SPECIFICATION

BITMIC Gateway

BITMIC Platform provides an interaction gateway for a variety of contents. It is provided in API form and SDK form. It is linked to the BITMIC Platform to help BITMIC be used among actual participants. In additi on, content (music, information) tailored to participants' usage status and price information can be distr ibuted and serviced, and Platform AI recommends an appropriate acceleration service.Platform API Servi ce

- Development SDK for Device / OS (APP)
- Product A.I Acceleration
- Platform Cloud Scale service

BITMIC API

Various modules will be provided for each ecosystem member to use. It will also be provided in the form of a separate asset so that it can be compatible with various OS, Device, and Platform.

- Window OS, Personal PC base Module
- Linux OS, Personal PC, Server Machine
- Mobile Base SDK, Google Play Store, iOS App Store Contents
- For Customer based Service

Exchange Service

BITMIC transactions can also be made using Wallet between individuals, but they use separate EXCHANGE SERVICE. You can exchange money with other COINs without going through the exchange. It can be used within the content and can also be used on the web using HTML5 format. Like the Home Trade System, the market price is provided in real time, making it convenient to use.

- Home Trade System (HTML5)
- Coin Prices API System (BITMIC Exchange)
- Blockchain exchange Service : API Service
- Exchange Service for Customer (QR)

BITMIC Wallet

Provides Wallet for various OSs so that players who have not used Cryptocurrency can easily use it. In add ition to the basic Wallet function, it is also equipped with the ability to directly collect information service s obtained within the BITMIC platform.

- BITMIC Wallet Service
- Smart Exchange Wallet
- BITMIC Exchange Service

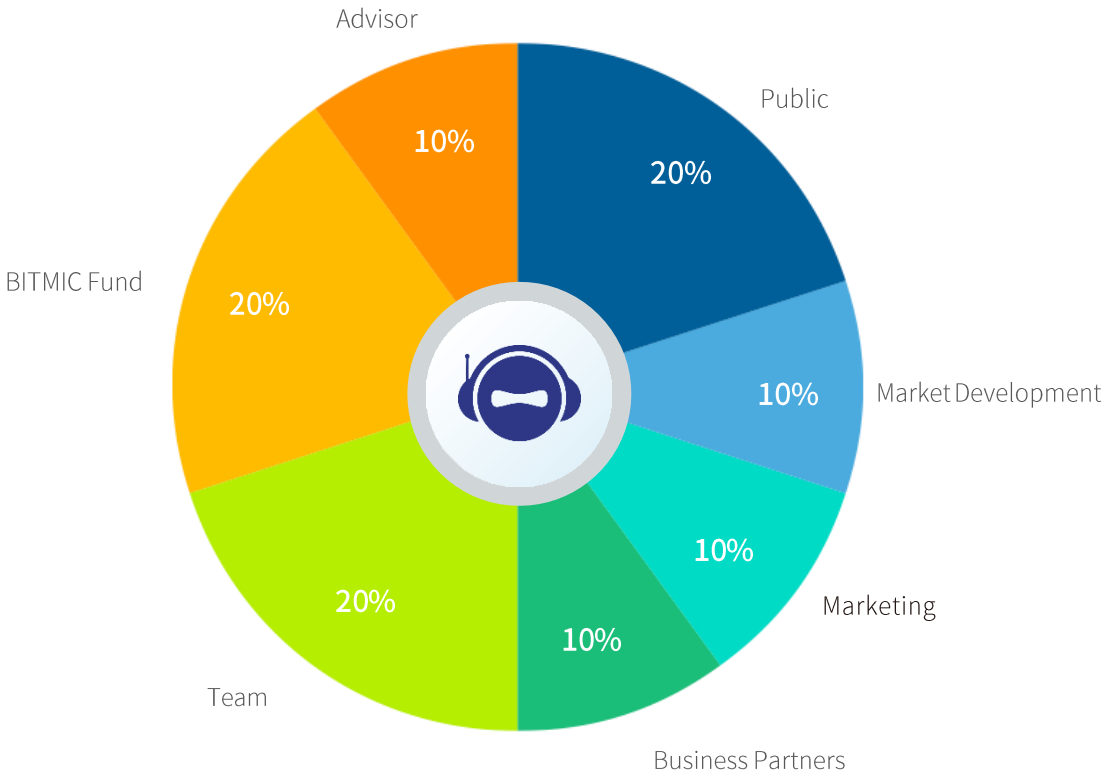
Global Open BITMIC Commerce
BITMIC Community Open
Set Cross Platform

BITMIC Platform will be serviced in earnest from the second half of 2021. For this service, we will start listi
ng the exchange for BITMIC and officially open the platform.

BITMIC DISTRIBUTION PLAN

BITMIC Platform's 2021 2Q Private Sale has been successfully completed and will be listed on t he exchange without additional sales. Except for public distribution and marketing quantities, all Token will be locked up for one year, and some marketing quantities can be partially distri buted to the outside after disclosure.

Item	Quantity	%
Total Token(Coin)	1,000,000,000	100%
Public	200,000,000	20%
Market Development	100,000,000	10%
Marketing	100,000,000	10%
Business Partners	100,000,000	10%
Team	200,000,000	20%
BITMIC Fund	200,000,000	20%
Advisor	100,000,000	10%



BITMIC BLOCKCHAIN

BITMIC is Token developed based on its own BSC Chain. The specific Token SPEC is as follows, and all of the public distribution and marketing quantities will be incinerated except for externally sold or bloc k deal quantities.

Total number of tokens	1,000,000,000 BMIC (BITMIC)
Token available	1,000,000,000 BMIC(BITMIC)
Nominal price	0.1 USDT
Emission rate	No Further tokens will be created
private sale	10% (Bonus up to 30%)
Public Sale	20% (pre-sale)
Soft cap	BTC 10
Hard cap	BTC 100
Token format	BSC Chain
Currency Accepted	ETH, BTC

DISCLAIMER AND RISKS DECLARATION

BITMIC Team wrote this white paper as a reference that provides specific information on the BITMIC PLATFORM and COIN we are planning. The purpose of this paper is to summarize the development direction of the product to COIN owners and USERs for the establishment of BITMIC PLATFORM and is not included in the same format as the contract.

It is not our duty to provide any data, code, or function, and the investment must be responsible for the investment or purchase decision.

The launch and implementation of BITMIC PLATFORM can vary depending on a number of variables, including regulatory risk, user engagement, blockchain technology adoption, and continuous development of BITMIC PLATFORM.

This white paper is only intended to encourage you to invest in the BITMIC Team or BITMIC, and is provided based on the time of preparation, so no content in the white paper, including conclusions, is guaranteed to be accurate and valid until the future point.

It should be noted that the information in this white paper was created by a corporation or related department to develop or implement BITMIC PLATFORM and cannot be requested to take any action. BITMIC Team does not guarantee you the accuracy of any statement in relation to this white paper, nor is it legally liable. For example, it does not guarantee that the white paper is based on legitimate rights and does not infringe on the rights of third parties, whether it is commercially valuable or useful, whether the white paper is suitable for achieving your purpose, or if there is any error in the contents of the white paper. Of course, the scope of exemption from liability is not limited to the aforementioned examples.

It is entirely up to you to refer to this white paper in your own decision-making, or to the benefits or losses arising from actions based on it. In other words, the BITMIC Team is not liable for damages, losses, debts, and other damages caused by using this white paper.

This document was produced only for the purpose of delivering information and is not a means of selling shares or securities. BITMIC does not include control.

Ownership of BITMIC does not mean being the owner of the BITMIC EDU Foundation, BITMIC PLATFORM, and other services and contents or being granted property rights. Even considering accepting opinions and feedback from the BITMIC community, the BITMIC team does not grant owners the right to participate in any decision-making or participate in the development of our platform. The actual progress and the figures specified in this paper may differ and are not guaranteed. Blockchain-related technologies based on regulatory uncertainty are subject to management supervision and other international agencies' regulations.

All actions related to COIN, such as the use of BITMIC and COIN, may be illegal depending on the investor's country and region.

Some countries or regions do not allow the exclusion of certain guarantees, so some of the exclusions may not apply to you. All risk liability for investment lies with the investor himself, and no compensation can be requested from the BITMIC Team.

DISCLAIMER AND RISKS DECLARATION

These are the same in countries where legal regulations on cryptocurrency already exist, including the United States, China, Singapore, and the Republic of Korea.

Therefore, citizens and residents of the countries listed above should consider participating in COIN trading more.

The items and goals presented in this paper are what we intend to do, but everyone or organization that wants to purchase BITMIC must be fully aware of and bear the inherent risks.

As for the risk of investment loss, it should be recognized that funds collected during the COIN sales process cannot be protected through insurance. If a fund aggregated with cryptocurrency loses its value, there is no public or private insurance system to recover it.

Or, if USERs are expected to suffer damage due to ICO regulations during the BITMIC Sale, BITMIC will immediately announce the relevant information through its website and refund participants from each country.

The above will be individually notified to the e-mail address submitted when participating in the ICO, and the return procedure for the COIN paid will proceed even if USERs are objectively unable to conduct ICOs or are expected to cause damage to USERs.

BITMIC is used as a means of payment for all services provided by BITMIC, and issuance of additional BITMIC requires consent from more than 70% of BITMIC owners.

Disclaimer of Warranties

Innovative technologies such as quantum computers can cause problems with cryptocurrencies, including BITMIC. Risks or future unpredictable problems arising with the application of new technologies can arise in different forms as mentioned in this paper.

I fully understand and agree that the use of BITMIC presupposes that the user has all the responsibilities that follow, and I must indemnify the BITMIC Team from all responsibilities.

The issued BITMIC will be sent to the user without an explicit or implied guarantee of merchantability, suitability and integrity for a specific purpose, etc.
